

## ISTE Questions on Time & Space complexity

1)  $\boxed{b} \underline{\underline{O(\log n)}}$

2)  $\boxed{c} \underline{\underline{O(1)}}$

3)  $\boxed{d} \underline{\underline{500}}$

If input size  $n = 500$ , then

$(500)^2 = 250000$  which is less than  $10^8$  but greater than  $10^4$

$$[\because O(N^2) \rightarrow N \leq 10^4]$$

4) ~~Operations~~ let the time taken for operation be ' $t$ ' (constant)  
↓  
array [i] + array [j]

Let ~~length~~ length (array) be  $N$ ,

$$\therefore O(N * Nt)$$

$$\Rightarrow O(N^2 t)$$

$$\Rightarrow \underline{\underline{O(N^2)}} \quad [\text{As } 't' \text{ is constant}]$$

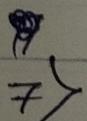

Space complexity  $\Rightarrow \underline{\underline{O(1)}}$

5) Time complexity =  $O(N)$

Space complexity =  $O(1)$

6) Time complexity =  $O(N)$

Space " " =  $O(1)$

7) \* couldn't solve

8)  $i = 1, 2, 4, 8, \dots, N$  [At  $N, i < N$   
 becomes false]  
 $\Rightarrow 2^0, 2^1, 2^2, 2^3, \dots, 2^x$  [ $x \rightarrow$  no. of times  
 loop is running]

$$\text{Diagram showing } N = 2^x \text{ and } \log N = x \log 2$$

$$N = 2^x$$

$$\log N = x \log 2$$

$$\log N = x \quad [\text{Ignore constants}]$$

$$\therefore \text{Time complexity} = \underline{\underline{O(\log N)}}$$

$$\text{Space complexity} = \underline{\underline{O(1)}}$$

9) Time complexity =  $O(N)$

Space " =  $O(1)$

10) We know in Binary search,

$$\boxed{\quad \quad \quad} \text{ } N = \frac{N}{2^0}$$

$$\downarrow \quad \quad \quad \frac{N}{2} = \frac{N}{2^1}$$

$$\downarrow \quad \quad \quad \frac{N}{4} = \frac{N}{2^2}$$

$$\downarrow \quad \quad \quad \frac{N}{8} = \frac{N}{2^3}$$

$$\vdots \quad \quad \quad \vdots \quad \quad \quad \vdots \quad \quad \quad \vdots$$
  
$$\boxed{\quad} \text{ } 1 = \frac{N}{2^x}$$

$$\therefore 1 = \frac{N}{2^x}$$

$$\Rightarrow 2^x = N$$

Taking log on both sides,

$$x \log 2 = \log N$$

$$x = \log N$$

∴ Time complexity =  $O(\log N)$

∴ Space complexity =  $O(1)$

11) ~~★~~ Recursion not done

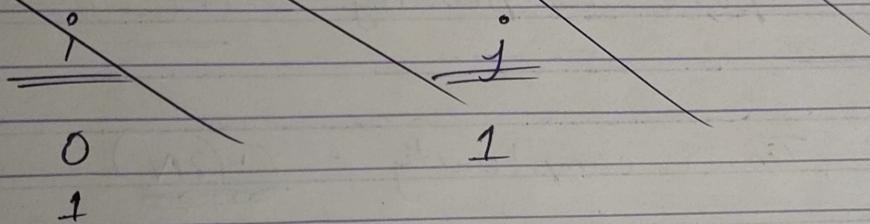

12) Let length [array] be  $n$

$\therefore \underline{\underline{O(kn)}} \rightarrow \underline{\text{Time complexity}}$

Space complexity  $\rightarrow \underline{\underline{O(1)}}$

13) ~~Let length [array] be  $n$~~

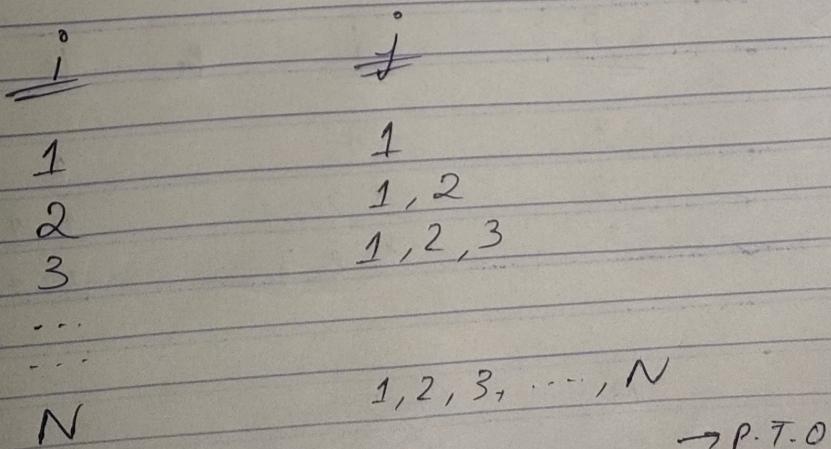

~~Observe the values of  $i$  &  $j$ .~~

13) ~~★ couldn't understand~~

14) ~~★ Recursion not done~~

15) Let length [array] be  $N$

$$1 + 2 + 3 + \dots + n$$

$$= \frac{n(n+1)}{2} \quad [\text{sum of 'n' natural nos. algo}]$$

$$= \frac{n^2 + n}{2}$$

$$= n^2 \quad [\text{we ignore the less dominating terms and constants}]$$

- Time complexity =  $O(N^2)$

- Space complexity =  $O(1)$

16) Time complexity  $\rightarrow \underline{\underline{O(2N)}} = \underline{\underline{O(N)}}$   
Space " =  $O(1)$

17) ~~④ Recursion not done~~

18) ~~④ couldn't solve~~

19) i    j    k

1                1                1

2                1, 2              1, 1, 2

3                1, 2, 3          1, 1, 2, 1, 2, 3

4

5

$$22) O(n \times n) = \underline{\underline{O(n^2)}} \rightarrow \begin{matrix} \text{Time} \\ \text{complexity} \end{matrix}$$

$$\text{Space complexity} = O(1)$$

$$23) \text{Time complexity} = \underline{\underline{O(n^2)}}$$

$$\text{Space} \quad " \quad = \underline{\underline{O(1)}}$$

$$24) \text{Time complexity} = O\left(\frac{N}{2}\right) = \underline{\underline{O(N)}} \quad (\text{Ignore constants})$$

$$\text{Space complexity} = O(1)$$
